- visual studio code
- Adobe Photoshop: Able to perform basic edits using fundamental tools.
- Adobe Premiere: Basic understanding of video editing fundamentals.

- Capcut: Familiar with basic video editing principles.
- Excel: Basic knowledge of formulas and data visualization, including creating simple dashboards.

Project: Interview Coach

- This project was carried out by four people, and I was one of them.

- I contributed to the project by developing and designing the interface using **HTML and CSS**.

- The project as a whole is built using **HTML, CSS, and JavaScript**.

Project Objective:

- The goal is to help users prepare for job interviews by providing interactive tests, instant evaluation, and content that helps them improve their skills.

Project Details:

- The application contains main pages such as the Home page, Interview page, and Contact Us page.

- It provides **interactive tests** for the user, and after finishing the test, the user receives **instant results with error analysis**.

- When the user reaches a certain score, training courses related to the job are **unlocked**.

- If the user achieves higher scores, a **detailed job description** is displayed to help them better understand the requirements.

- The design is **responsive**, so it works smoothly on both computers and mobile devices.
